

AGENTS

ota-protocol — AGENTS.md

Base agent rules live in the Helix Constitution submodule (`constitution/AGENTS.md` + the `constitution/Constitution.md` it references). **READ THOSE FIRST.** Locate the constitution from any nested depth via its `find_constitution.sh` helper. Canonical reference: <https://github.com/HelixDevelopment/HelixConstitution>

Restated essentials (the base file is authoritative): no bluffing — every PASS carries positive evidence (§11.4); every gate has a paired mutation (§1.1); no guessing language (§11.4.6); credentials never tracked (§11.4.10); never force-push (§11.4.113); hardlinked backup before any destructive op (§9). Project-specific rules extend — never weaken — these.
